

Gentle clues for typst

Add some beautiful, predefined admonitions or define your own.

Test

Test

Getting Started

A minimal starting example

```
#import "@preview/gentle-clues:0.9.0": *
#tip[Check out this cool package]
```

Tip

Check out this cool package

Usage

1. Import the package like this:

```
#import "@preview/gentle-clues:0.9.0": *
```

2. Change the default settings for a clue.

```
#show: gentle-clues.with(
  headless: false, // never show any headers
  breakable: false, // default breaking behavior
  header-inset: 0.5em, // default header-inset
  content-inset: 1em, // default content-inset
  stroke-width: 2pt, // default left stroke-width
  border-radius: 2pt, // default border-radius
  border-width: 0.5pt, // default boarder-width
)
```

3. Use a predefined clue without any options

```
#info[You will find a list with all
predefined clues at the last page.]
```

Turns into this →

Info

You will find a list with all predefined clues at the last page.

4. Or add some options like a custom title

```
#example(title: "Custom title")
[ Content ...]
```

Turns into this →

Custom title

Content ...

5. **118n:**

- The current language which is set by `#set text(lang: "de")` changes the default header title.
- Currently supported are en, de, fr, es and zh. This package uses linguify for language settings. Feel free to contribute more languages.

All Options for a clue

All default settings can also be applied to a single clue through passing it as an named argument. Here is a list of accepted arguments:

```
title: auto, // [string] or [none] (none will print headless)
icon: emoji.magnify.l, // [file] or [symbol] or [none]
accent-color: navy, // left accent color [color], [gradient] or [pattern]
border-color: auto, // bottom and right border color [color], [gradient] or [pattern]
header-color: auto, // [color], [gradient] or [pattern]
body-color: none, // [color], [gradient] or [pattern]
width: auto, // total width [length]
radius: auto, // radius of the right border [length]
border-width: auto, // width of the right and down border [length]
content-inset: auto, // [length]
header-inset: auto, // [length]
breakable: auto, // if clue can break onto next page [bool]
```

Breaking news

Clues can now break onto the next page
with option: `breakable: true`

Lorem ipsum dolor sit amet, consectetur
adipiscing elit, sed do eiusmod tempor

incididunt ut labore et dolore magnam
aliquam quaerat voluptatem. Ut enim
aeque doleamus animo, cum corpore
dolemus, fieri.

This is a two columns layout.

Color management

Clues can be styled in your liking.

The simplest way is to change the `accent-color` which will be the thick border stroke on the left side. Header and border color will then automatically derived from this color.

But you can set the `header-color`, `border-color` and `body-color` independently with a color, gradient or pattern.

Example:

```
#clue(
  title: "Color management",
  accent-color: gradient.linear(red, blue, dir:ttb),
  header-color: gradient.linear(red, yellow, blue),
  border-color: blue.darken(40%),
  body-color: pattern(text(fill:fuchsia.lighten(40%),"\n
  ...))
)[...]
```

Define your own clue

```
// Define a clue called ghost
#let ghost(title: "Buuuuuuuh", icon: emoji.ghost , ..args) = clue(
  accent-color: purple, // Define a base color
  title: title,        // Define the default title
  icon: icon,           // Define the default icon
  ..args               // Pass along all other arguments
)
// Use it
#ghost[Huuuuuuuh.]
```

The result looks like this.

 **Buuuuuuuh.**

Huuuuuuuh.

Tip

Use the `svg-emoji` package until emoji support is fully supported in typst

List of all predefined clues

idea

Idea

Lets make something beautifull.

#abstract

Abstract

Make it short. This is all you need.
